

# Shikhar Srivastava

Full-Stack Developer · AI Enthusiast · Competitive Programmer

[your-email] | [github.com/shikhar746](https://github.com/shikhar746) | [linkedin.com/in/your-handle](https://linkedin.com/in/your-handle)

## EDUCATION

**Indian Institute of Technology Kharagpur**

CGPA: 8.28 / 10

Bachelor of Technology, Mechanical Engineering · Third year

## PROJECTS

### LOOP: AI Customer-Feedback Intelligence

[Live](#) · [GitHub](#)

*Next.js 14, TypeScript, Prisma, Supabase PostgreSQL + pgvector, NextAuth, Claude API, Gemini, Voyage AI, Recharts*

- Built a multi-tenant platform that ingests feedback from support tickets, app reviews, NPS surveys, sales notes and community threads.
- Used the Claude API with forced tool use and Zod-validated output to classify sentiment, themes and feature areas, with Gemini as a fallback.
- Added semantic search over feedback with Voyage AI embeddings in pgvector, a natural-language “Ask LOOP” query interface, theme trend and spike detection, and Voice-of-Customer reports.
- Enforced tenant isolation and Viewer / Analyst / Admin roles in a service layer covered by 127 unit tests and 28 smoke tests.

### Minnerva: AI-Assisted Learning Management System

[Live](#) · [GitHub](#)

*Next.js 16, React 19, Prisma, Neon PostgreSQL, NextAuth v5, Upstash Redis, Cloudinary, shadcn/ui*

- Built an LMS where instructors run workshop cohorts, assign tasks, grade submissions and issue certificates generated from templates.
- Implemented bring-your-own-key AI grading routed across 6 model providers (Groq, OpenAI, Claude, Gemini, Kimi, Qwen) with human review before results are released.
- Designed two-level RBAC (platform and workshop scope) with workshop-scoped cohort isolation, plus an automated forum moderation pipeline.
- Hardened security with AES-256-GCM encryption of stored API keys, Zod validation and custom SSRF guards.

### CloudStorage Explorer: Full-Stack Cloud Drive

[Live API](#) · [GitHub](#)

*React 19, TypeScript, Vite, Tailwind CSS, Node.js, Express 5, Zod, PostgreSQL (Supabase), Supabase Storage*

- Built a Drive-style app with nested folders, starred items, inherited folder permissions and granular sharing.
- Added password-protected public links with optional expiry, Google Sign-In, and a soft-delete trash that purges automatically.
- Designed a dual-path upload pipeline that keeps large files out of server memory, with rate limiting and JWT / bcrypt authentication.
- Served the React SPA from the Express API on a single origin, which fixed cross-site session-cookie failures in some browsers.

## TECHNICAL SKILLS

**Languages:** C++, JavaScript, TypeScript, SQL

**Web:** React, Next.js, Node.js, Express, Tailwind CSS, REST APIs, NextAuth, Three.js

**Data:** PostgreSQL, Prisma, Supabase, Neon, Redis (Upstash), pgvector

**AI:** LLM APIs (Claude, OpenAI, Gemini), tool use and structured output, embeddings and semantic search

**Tools:** Git, GitHub, Vercel, Render, Cloudinary

**Core:** Data structures and algorithms, competitive programming
